1. Is the font type in helloworld2.html similar to helloworld.html (you created in the first week)?

The font type in **helloworld2.html** is likely different from **helloworld.html** created in the first week if it did not use Bootstrap. Bootstrap applies its own default fonts (such as "Helvetica Neue", Helvetica, Arial, sans-serif) which might differ from the default fonts used in plain HTML.

| helloworld.html | helloworld2.html |

2. What happens if you remove `<div class="container"></div>`?

When we remove **<div class="container"></div>**, the indentation of the text is removed and the text is aligned to the left border.

Before removing   After removing

3. What is the purpose of `<div class="container"></div>`?

The **<div class="container"></div>** structure provides an effective way to group and organize content or elements on a webpage. By applying the container class to a div, you can style and manage all the contained elements simultaneously or just the container itself. In Bootstrap, the "container" class creates a responsive, fixed-width container that adjusts its size and margins based on the viewport or device width, helping to ensure consistent layouts across different screen sizes.
